3. Market Developments in Q4 2021

Equity Markets

In 2021, most countries were able to benefit from the global recovery in 2021, as supply-chain bottlenecks eased, consumers started spending again, and international travel picked up.

U.S. and other developed-markets stocks enjoyed robust returns throughout 2021, despite a little hiccup at the end of the third quarter. U.S. stocks finished 2021 near fresh record highs, having posted their third consecutive year of double-digit gains thanks to a strong economic rebound that helped the market weather the ongoing waves of the coronavirus pandemic. In the fourth quarter of 2021 alone, the U.S. markets gathered steam, with the S&P 500 index gaining 10.65% while the Nasdaq Composite was up 8.28%. Concern over the quickly spreading omicron variant spooked U.S. markets in December, but in a pattern that played out many times in 2021, stocks shook off the news and soon reached new highs. The U.S. market gained 9.5% in the final three months, its best quarter since fourth-quarter 2020. With that rally, U.S. stocks are posting their best three-year returns in 24 years.

Europe and U.K. stocks posted an impressive performance for the year, powered by solid fundamentals, pandemic support from the European Central Bank, and increased investor optimism as vaccine programs gained momentum. However, not all countries were able to participate in the global stock market rally. Latin American stocks landed in negative territory for the second consecutive year as those economies struggled to contain the effects of the pandemic.

Across major markets, China was the glaring exception from a robust 2021, with its stock market posting a severe loss for the year. Regulatory crackdowns and the near default by a major property developer Evergrande shook investor confidence and destabilized stock returns. The Hang Seng Index fell 14.08% and the SSE Composite Index, tracking the largest caps listed on the Shanghai exchange, generated a 4.80% return over the same period.

Bond Markets

The FTSE WGBI fell 1.79% for the quarter (in USD). With the Fed signaling a shift toward less-accommodative monetary policy, soothing investor concerns about rising inflation, the 10-year yield finished 2021 at 1.52%, off from its highs but still up 0.59 basis points from where it started the year. The 10-year yield reached a high in March at 1.75%, and the quarter-high was the 1.65% level.

The favorable economic backdrop for stocks in 2021 was bad news for bond investors. Surging inflation sent bond prices lower, leading key bond market indexes to post their first losses since 2013.

The 10-year U.S. Treasury yield rose rapidly at the start of the new year as optimism about the economic recovery began to spread thanks to the rollout of COVID-19 vaccines.

Source: Morningstar Direct

The Singapore average buying rates of 10-year bond yield has been on an upward trend since early August, a trend similar to the US treasury bill. Moreover, Singapore's bond yield saw a steeper increase at the beginning of the fourth quarter, peaking at 1.85% in early November. The yield level ended the year at 1.67%, edging up from 1.59% in the third quarter.

The Outlook

As investors look ahead to 2022, they face a landscape with continued strong cross-currents, but ones that many investors for now, appear to feel confident they can navigate. Even as the omicron COVID-19 variant threatens a new round of the kinds of supply-chain shutdowns that fueled 2021's inflation rise, price pressures are widely expected to abate by mid-year. The Federal Reserve has signaled it will be shifting from easy-money policies to raising interest rates, but those moves are expected to be measured.

Closer to home, Morningstar's Asia coverage is trading 1.0 time to fair value, which means the broad market is fairly valued and implies that the risk/reward buffer is limited. Regulatory concerns across multiple sectors in China, debt risks in China's real estate sector, and inflation have hurt sentiment. For the next two quarters, Morningstar analysts expect anxiety over rising U.S. interest rates to limit equity market gains, but expect China issues that have been sold down and defensive names with the ability to grow dividends to be relatively firm as investors rotate toward value.

5. Summary: Performance of CPFIS-Included Funds

	For the period ended Dec. 31, 2021 (% in SGD)			
Average Returns	3 months	1 Year	3 Years (Cumulative)	3 Years (Annualized)
All CPFIS-Included Funds	0.35	6.32	37.12	10.68
Unit Trusts Only	0.50	7.25	38.36	11.01
ILPs Only	0.28	5.87	36.56	10.53

Source: Morningstar Direct.

Figure 3 Average Performance of CPFIS-Included Funds at End Q4 2021 (% in SGD)

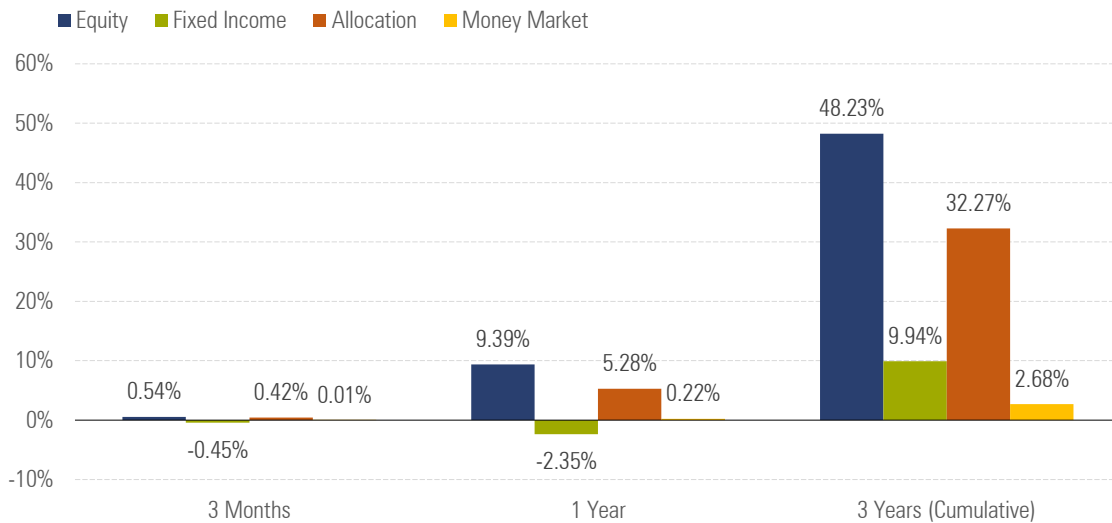

Source: Morningstar Direct.

In the fourth quarter, the overall performance of CPFIS-included funds (unit trusts and ILPs combined) was flat. The average performance was up 0.35%, versus the third quarter's 1.13% fall and the second quarter's 3.31% gain. As a comparison, the global stock and bond market ended the quarter flat. MSCI World Index returned 7.02%, while FTSE WGBI finished with a 1.79% loss. MSCI AC Asia ex Japan slid another 1.92% after losing 8.43% from a quarter prior.

Over a longer period, funds under the CPF scheme were unable to beat the global equity index. The one-year return for the CPF funds averaged 6.32%. Cumulatively, the CPF funds gained 37.12% over the past three years.

Figure 4 Average Performance of CPFIS-Included Funds at End Q4 2021 by Asset Class (% in SGD)

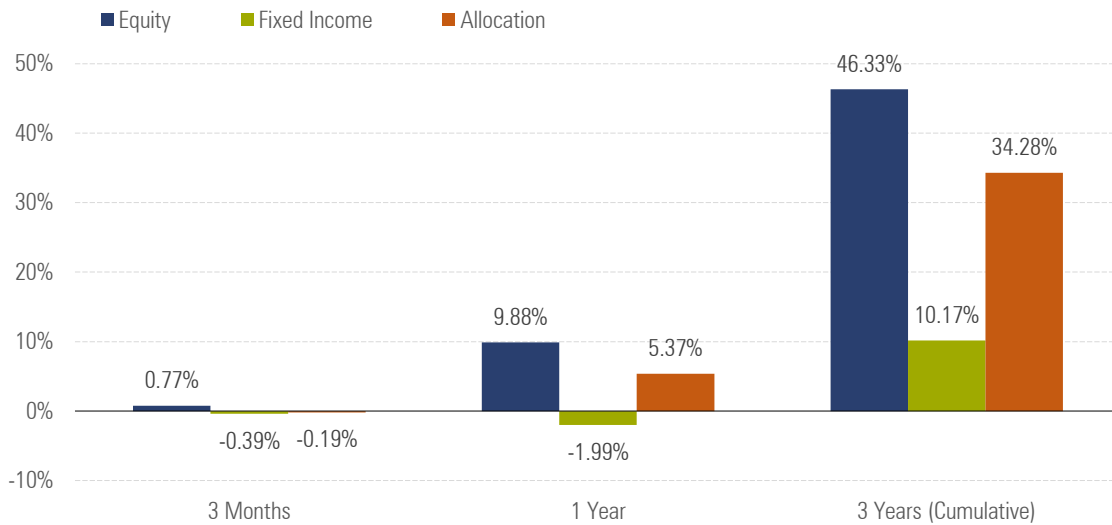

Source: Morningstar Direct.

All asset classes finished the past quarter little changed. Equity CPF funds registered a 0.54% return and bond fund a 0.45% loss, while allocation funds returned 0.42%. Money market funds ended with a minimal 0.01% return.

However, over longer reporting intervals, equity funds represented some of the best performers, with a one-year return of 9.39% and a three-year cumulative return of 48.23% on average. Allocation funds came next, returning 5.28% over the past year and 32.27% over the three-year period.

Figure 5 Average Performance of CPFIS-Included Unit Trusts at End Q4-2021 by Asset Class (% in SGD)

Source: Morningstar Direct.

Figure 6 Average Performance of CPFIS-Included ILPs at End Q4-2021 by Asset Class (% in SGD)

Source: Morningstar Direct.

By Morningstar Category, 14 out of 24 equity groups of Unit Trust CPFs returned positively over the fourth quarter. The best performers came from U.S. and global equities. US large-cap blend equity came first with a quarterly gain of 10.08% and global large-cap blend equity followed with a 7.41% return.

Two Japanese equity categories, Japan Flex-Cap Equity and Japan Large-Cap Equity, ranked at the bottom of the chart, with an approximately 5% loss. China equity funds continued to face headwinds. The three funds belonging to this group averaged a loss of 3.88%. Greater China Equity fared slightly better, dropping 0.96% in the quarter. China Equity - A Shares, which composed one fund, has been more resilient and returned

2.61%. For bond unit trust CPFs, all three categories, Asia Bond (-0.24), Other Bond (-0.38), and SGD Bond (-0.44) posted a negative return.

In the ILP universe, the best performing equity categories were sector equity healthcare, property - indirect global, and US large-cap growth equity. They were also the one-year top category performers. Japan large-cap equity and global emerging markets equity were the worst performers, down 3.91% and 3.63%, respectively. All bond ILP categories but other bond posted a negative return. Over the period, bond ILPs posted a near-flat loss, a trend similar to the unit trust universe.

6. Summary of Performance

Morningstar Rating is based on funds' risk-adjusted returns within its Morningstar Category peer group. Morningstar gives more weight to downside variation when calculating Morningstar Risk-Adjusted Return (MRAR) because investors are generally risk-averse and dislike downside variation. Morningstar Rating is calculated within each Morningstar Category peer group because the relative star ratings of two funds should be affected more by manager skill than by market circumstances or events that lie beyond the fund managers' control. The Morningstar Rating is based on MRAR, using Morningstar Risk-Adjusted Return % Rank for funds in a category. Morningstar calculates ratings for the three-, five-, and 10-year periods, and then the overall Morningstar Rating is based on a weighted average of the available time-period ratings.

The overall Morningstar Rating weight is shown below:

Months of Total Returns	Overall (Weighted) Morningstar Rating
36-59	100% of three-year rating
60-119	60% of five-year rating 40% of three-year rating
120 or more	50% of 10-year rating 30% of five-year rating 20% of three-year rating

There are certain cases where funds are *ineligible* for Morningstar Rating. This includes funds which are:

- Categorized in any Other/ Miscellaneous category
 - Restricted funds
 - Virtual share classes- Also known as a convenience or currency class, virtual classes are investments whose performance is quoted in another currency, or allow investors to purchase shares in a currency other than its base currency
 - Inception date/ performance start date is shorter than 36-month continuous monthly returns available
 - Dormancy history led to shorter than 36-month continuous monthly returns available
 - Obsolete funds
 - Funds whose peer group contains less than five distinct portfolios
- **Morningstar Rating ("star rating")**

To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return is plotted on a bell curve: If the fund scores in the top 10% of its category, it receives 5 stars (Highest); if it falls in the next 22.5% it receives 4 stars (Above Average); a place in the middle 35% earns 3 stars (Average); those lower still, in the next 22.5%, receive 2 stars (Below Average); and the bottom 10% get only 1 star (Lowest). The Overall Morningstar Rating is a weighted average of the available three-, five-, and 10-year ratings.

- **Morningstar Return Rating**

An annualized measure of a fund's excess return relative to the return of the 90-day Treasury Bill over a three-, five-, or ten-year period. This is a component of the Morningstar Risk-Adjusted Return. Morningstar Return is displayed in decimal format and is calculated only for those investments with at least three years of performance history.

- **Morningstar Risk Rating**

An annualized measure of a fund's downside volatility over a three-, five-, or ten-year period. This is a component of the Morningstar Risk-Adjusted Return. Morningstar Risk is displayed in decimal format and is calculated only for those investments with at least three years of performance history. A high number indicates higher risk and low numbers indicate lower risk.

- **Morningstar Fee Level**

The Morningstar Fee Level evaluates a mutual fund share class's expense ratio relative to other funds that invest in a similar asset class and have similar distribution characteristics. Within each Comparison Group, a fund share class' expense ratio is ranked against its peers using five quintiles. Each quintile corresponds to one of the following scores:

Low: Least Expensive quintile,

Below Average: Second- Least Expensive quintile,

Average: Middle quintile,

- **Morningstar Sustainability Rating**

Morningstar assigns Sustainability Ratings by ranking all scored funds within a Morningstar Global Category by their Historical Sustainability Scores. The ranked funds are then divided into five groups, based on a normal distribution, and each receives a rating from "High" to "Low." Although a higher rating is better than a lower one, please note that due to the risk component of the scores, lower scores are better (and lead to higher ratings) than higher scores and indicate that a fund is, on average, invested in fewer companies with a high ESG risk under Sustainalytics' ESG Risk methodology, and therefore exposed to less risk driven by E, S or G factors.

Percent Rank Rating Depiction

Top 10% High 5 globes

Next 22.5% Above Average 4 globes

Next 35% Average 3 globes

Next 22.5% Below Average 2 globes

Bottom 10% Low 1 globe

To receive a Portfolio Sustainability Score, at least 67% of a portfolio's assets under management must have a company ESG Risk Rating. The percentage of assets under management of the covered securities is rescaled to 100% before calculating the Portfolio Sustainability Score.

6.1 Morningstar Ratings for CPFIS-Included Unit Trusts

Full List of CPFIS Included UTs with Morningstar Data

Please note, funds need 36 months of performance history in order to have a Morningstar Rating and certain categories are not eligible for rating. For Sustainability Rating, at least 67% of the portfolio's assets under management must have a company ESG Risk Rating.

List A Funds

'List A' - Funds that have met all new admission criteria: i) The revised benchmark set at the top 25 percentile of funds in their global peer group; ii) Expense ratio (TER) that is not higher than that set by CPF Board by the respective risk class. The expense ratio criteria will also apply to existing funds from 1 January 2008 onwards; iii) 0% sales charge; iv) In addition, new funds applying for inclusion under CPFIS should preferably have a track record of good performance for at least 3 years.

7.1.2 Complete List of CPIFS Included ILPs

List A Funds

'List A' - Funds that have met all new admission criteria: i) The revised benchmark set at the top 25 percentile of funds in their global peer group; ii) Expense ratio (TER) that is not higher than that set by CPF Board by the respective risk class. The expense ratio criteria will also apply to existing funds from 1 January 2008 onwards; iii) 0% sales charge; iv) In addition, new funds applying for inclusion under CPIFS should preferably have a track record of good performance for at least 3 years.

7.4 Data Definitions

Return

Expressed in percentage terms, Morningstar's calculation of total return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital-gains distributions during that month, and dividing by the starting NAV. Reinvestments are made using the actual reinvestment NAV, and daily payoffs are reinvested monthly. Unless otherwise noted, Morningstar does not adjust total returns for sales charges (such as front-end loads, deferred loads and redemption fees), preferring to give a clearer picture of a fund's performance. The total returns do account for management, administrative, 12b-1 fees and other costs taken out of fund assets. Total returns for periods longer than one year are expressed in terms of compounded average annual returns (also known as geometric total returns), affording a more meaningful picture of fund performance than non-annualized figures.

Annualized Returns

For standard time periods (1, 3 5 and 10 years) returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100)^{(1/y)} - 1) * 100$$

where,

Cum Ret = the cumulative return

y = the number of years (1,3, 5 or 10)

For customized time periods returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100)^{(365.25/d)} - 1) * 100$$

where,

Cum Ret = the cumulative return

d = the number of days between the start and end date

Annual Report Net Expense Ratio

The percentage of fund assets used to pay for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's NAV. Sales charges are not included in the expense ratio. The expense ratio for fund of funds only includes the wrap or sponsor fees and does not include the underlying fund fees.

Standard Deviation

A statistical measurement of dispersion about an average, which, for a mutual fund, depicts how widely the returns varied over a certain period of time. Investors use the standard deviation of historical performance to try to predict the range of returns that are most likely for a given fund. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility. Standard deviation is most appropriate for measuring risk if it is for a fund that is an investor's only holding. The figure can not be combined for more than one fund because the standard deviation for a portfolio of multiple funds is a function of not only the individual standard deviations, but also of the degree of correlation among the funds' returns. If

a fund's returns follow a normal distribution, then approximately 68 percent of the time they will fall within one standard deviation of the mean return for the fund, and 95 percent of the time within two standard deviations. Morningstar computes standard deviation using the trailing monthly total returns for the appropriate time period. All of the monthly standard deviations are then annualized

Sharpe Ratio

A risk-adjusted measure developed by Nobel Laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance. The Sharpe ratio is calculated for the past 36-month period by dividing a fund's annualized excess returns by the standard deviation of a fund's annualized excess returns. Since this ratio uses standard deviation as its risk measure, it is most appropriately applied when analyzing a fund that is an investor's sole holding. The Sharpe Ratio can be used to compare two funds directly on how much risk a fund had to bear to earn excess return over the risk-free rate.

The Sharpe Ratio can be calculated one of three ways:

1. Standard Sharpe Ratio (SharpeRatio_M)
2. Arithmetic Sharpe Ratio (SharpeRatio_A)
3. Geometric Sharpe Ratio (SharpeRatio_G)

$$\text{Sharpe Ratio}_M = \frac{\left(\frac{\sum_{i=1}^n R_i}{n} \right) - \left(\frac{\sum_{i=1}^n RF_i}{n} \right)}{\text{St Dev}_M}$$

$$\text{Sharpe Ratio}_A = \frac{\left[\prod_{i=1}^n (1 + R_i) \right]^{\frac{m}{n}} - \left[\prod_{i=1}^n (1 + RF_i) \right]^{\frac{m}{n}}}{\text{St Dev}_A}$$

$$\text{Sharpe Ratio}_G = \frac{\left[\prod_{i=1}^n (1 + R_i) \right]^{\frac{m}{n}} / \left[\prod_{i=1}^n (1 + RF_i) \right]^{\frac{m}{n}} - 1}{\text{St Dev}_A}$$

where,

$$\text{St Dev}_M = \sqrt{\frac{1}{n-1} \cdot \sum_{i=1}^n (R_i - \bar{R})^2}$$

$$\text{St Dev}_A = \text{St Dev}_M \cdot \sqrt{m}$$

and

St Dev_A = Annualized Standard Deviation

St Dev_M = Standard deviation

R_i = Return of the investment in time period i

RF_i = Return of the risk-free investment in time period i

m = Number of time periods in a year

n = Total number of time periods

\bar{R} = Average return of the investment over the time period

Information Ratio

Information ratio is a risk-adjusted performance measure. The information ratio is a special version of the Sharpe Ratio in that the benchmark doesn't have to be the risk-free rate. The Israelson method is an adjustment of the Information Ratio to take into account the inconsistency of the IR when excess returns are negative.

$$\text{Ratio}_{\text{Israelson}} = \frac{ER}{\text{Risk}^{\frac{ER}{abc(ER)}}} = \begin{cases} \frac{ER}{\text{Risk}} & \text{if } ER \geq 0 \\ ER \cdot \text{Risk} & \text{if } ER < 0 \end{cases}$$

Max Gain

The peak to trough incline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak to the trough.

Max Drawdown

The peak to trough decline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak to the trough.
